check_ollama	<i>Check if Ollama is running</i>
--------------	-----------------------------------

Description

This function checks whether the Ollama server is running at ‘`http://localhost:11434/`’. It sends a request to the URL and determines if the server is reachable.

Usage

```
check_ollama()
```

Value

A character string: ““ollama is running”“ if the server is accessible, otherwise ““ollama is not running”“.

fetch_models	<i>Fetch available models from Ollama API</i>
--------------	---

Description

Fetch available models from Ollama API

Usage

```
fetch_models()
```

Value

Character vector of model names or an error message

format_chat_history *Convert chat history to downloadable format*

Description

Convert chat history to downloadable format

Usage

```
format_chat_history(messages, format = c("HTML", "CSV"))
```

Arguments

messages	List of chat messages
format	Character string specifying format ("HTML" or "CSV")

Value

Formatted chat history as a character string (HTML) or a data frame (CSV)

format_message_md *Format a message as markdown*

Description

This helper function formats a message with a specified role (e.g., "User", "Assistant", "System Status") into a markdown-styled string. If the role is "System Status", it includes the status of the Ollama server.

Usage

```
format_message_md(role, content)
```

Arguments

role	A character string specifying the role (e.g., "User", "Assistant", "System Status").
content	A character string containing the message content.

Value

A character string formatted as markdown.

<code>parse_message</code>	<i>Parse a markdown-formatted message</i>
----------------------------	---

Description

This function extracts the role and content from a markdown-formatted message.

Usage

```
parse_message(message)
```

Arguments

<code>message</code>	A character string containing the markdown-formatted message.
----------------------	---

Value

A list with two elements:

<code>role</code>	A character string representing the role (e.g., "User", "Assistant", "System").
<code>content</code>	A character string containing the extracted message content.

<code>run_app</code>	<i>Run shiny Application for Chat Interface</i>
----------------------	---

Description

Launches a shiny app for interacting with the Ollama API

Usage

```
run_app()
```

Value

No return value, called for side effects.

send_ollama_message *Send message to Ollama API and get response*

Description

Send message to Ollama API and get response

Usage

```
send_ollama_message(  
  message,  
  model,  
  temperature,  
  num_ctx,  
  top_k,  
  top_p,  
  system,  
  messages  
)
```

Arguments

message	Character string containing the user message
model	Character string specifying the model name
temperature	Numeric value specifying the temperature
num_ctx	Integer value specifying the number of contexts
top_k	Integer value specifying the top K
top_p	Numeric value specifying the top P
system	Character string specifying the system
messages	List of messages

Value

A list with elements ‘success’ (logical) and either ‘response’ (character) or ‘error’ (character)
